Professional Summary

Pre-final year Computer Science undergraduate with strong foundations in backend development and DSA. Experienced in building secure and scalable systems using Node.js and PostgreSQL, with hands-on knowledge of JWT authentication, database transactions, Redis caching and performance optimization.

Projects

WealthFlow AI — Fintech Platform

Node.js, Express.js, PostgreSQL, Prisma, React.js

- Engineered **JWT-based authentication** with **bcrypt** to secure protected APIs.
- Maintained **ACID compliance** using **database transactions** to ensure atomic financial updates.
- Integrated **Gemini API** for automated receipt parsing, reducing manual entry by 70%.
- Automated recurring transactions and monthly reports using **cron jobs**, cutting manual effort by 80%.
- Optimized queries with **pagination and indexing**, improving response performance by 50%.
- Implemented **rate limiting** to enhance API reliability and prevent abuse.

URL Shortener Service

Node.js, Express.js, PostgreSQL, Redis, Prisma

- Engineered **Base62 encoding** for collision-free short code generation at scale.
- Implemented **Redis caching** for sub-millisecond redirects, reducing database load by 90%.
- Built **click analytics** tracking geography and device data using IP geolocation.
- Designed **link expiry** and **password protection** features for enterprise-grade security.
- Architected system capable of handling **1000+ requests/second** with rate limiting per user.
- Secured APIs with **JWT authentication** for user-specific link management and dashboards.

Skills

Languages: Java, JavaScript

Backend: Node.js, Express.js, RESTful APIs, Backend Development, API Development

Database: PostgreSQL, Prisma ORM, Redis

Authentication & Security: JWT, bcrypt, Rate Limiting

Core Concepts: Data Structures and Algorithms, OOP, Database Transactions, API Design, System Design

Tools: Git, GitHub, Postman

Education

Guru Gobind Singh Indraprastha University (GGSIPU), Delhi

B.Tech in Artificial Intelligence and Machine Learning

Expected May 2027

CGPA: 8.0/10

Relevant Coursework: Data Structures and Algorithms, Operating Systems, DBMS, Computer Networks

Achievements

- Secured **2nd Place** in Codeathon Coding Challenge among 100+ participants.
- Solved **150+ DSA problems** on LeetCode.
- Core Member, **AI Renaissance Society** — organized and hosted technical events and workshops.
